

Option A: Figure Font: Arial 6pt, Caption Font: 8pt

Arial typeface in the figure (Captions should be done in Word so, you can make them any size on-the-fly, but I included them here to give the whole 'look')

Option A. Graph example

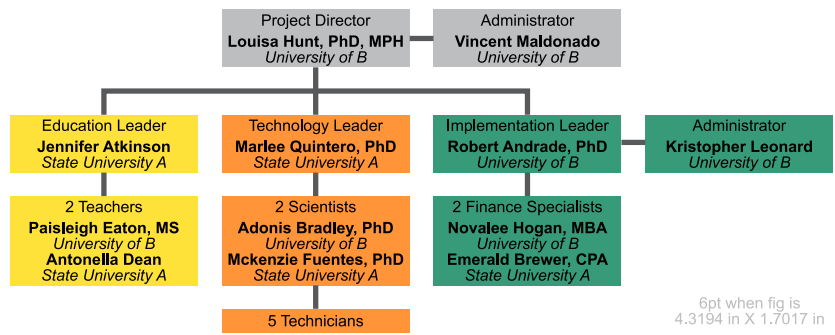

NSF Grants: This is Arial 10pt font. NSF gives a few choices for typeface, but Arial 10pt is the most common selection. With this font and size, the line spacing needs to be multiple: 1.05+ in order to meet the criteria of 6 lines per inch. A font size of less than 10 points may be used for figures, tables, or diagram captions. 1-inch margins.

This is dummy text just to fill the space and give an idea of the general look and feel of this body of text. Grant proposals are limited by page number, so space is always tight. Figures must be clear and readable, while taking up no more space than required. This is dummy text just to fill the space and give an idea of the general look and feel of this body of text. Grant proposals are limited by page number, so space is always tight. Figures must be clear and readable, while taking up no more space than required.

This is dummy text just to fill the space and give an idea of the general look and feel of this body of text. Grant proposals are limited by page number, so space is always tight. Figures must be clear and readable, while taking up no more space than required. This is dummy text just to fill the space and give an idea of the general look and feel of this body of text. Grant proposals are limited by page number, so space is always tight. Figures must be clear and readable, while taking up no more space than required.

This is dummy text just to fill the space and give an idea of the general look and feel of this body of text. Grant proposals are limited by page number, so space is always tight. Figures must be clear and readable, while taking up no more space than required. This is dummy text just to fill the space and give an idea of the general look and feel of this body of text.
